Subject: Gas Service for Sodium Burning - Santa Susana

Reference: TL to R. W. Hartzler from P. R. Davidson, Ventura County Air  
Pollution Control, dated 4-24-69

An extension to the Santa Susana natural gas service from the Bldg. 020 area to the burn pit area will cost approximately \$6000. This does not include piping within the burn area since this will be the same for natural gas or propane.

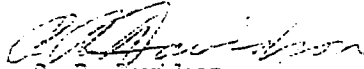

As an alternate to natural gas, we can relocate our 500 gallon propane tank from Building 011 to the burn area without jeopardizing the use of the tank for servicing small propane bottles. If this tank can not be conveniently moved, we can rent a 1000 gallon tank for \$70 per year.

For sodium burning operations, the estimated cost of natural gas is \$120 per year, and for propane gas, \$520 per year, using our tank. By renting a 1000 gallon tank, we can reduce the propane cost to \$465 per year, including the tank rental.

For cost comparison, we are looking at a \$6000 investment versus a \$100 relocation cost, with fuel cost differentials per year ranging from \$345 minimum to \$400 maximum.

In view of the uncertainties of a continuing sodium burning program at Santa Susana, I recommend that we take the most expedient course by installing a propane system. This can be done very quickly, and there will be no capital loss if the burning program must be terminated, or if an increase in activity makes a natural gas line advisable in the future.

Piping and controls within the burn area will cost approximately \$500.

TOXIC MATERIALS - DISPOSED OF AND ON HAND

D/052 - Disposal Area - SSFL

The following listing of toxic materials have been disposed on in the Protective Services Area I Disposal Area during the period of June 1968 thru June 1970:

<u>MATERIALS</u>	<u>AMOUNT</u>
Aqueous Ammonia	538 Gallons
Aluminum Chloride	230 Pounds
Carbon Tetrachloride	28 Gallons
Alkaline Cleaner	150 "
Chloroform	8 "
Benzene-Hydrochloric Acid Mixture	990 "
Methanol-Cupric Chloride-Aluminum Chloride Mixture	880 "
Hydrofluoric Acid	110 "
Neutralized Acid	110 "
Plating Solution	255 "
Sulfuric Acid	120 "
Caustic Soda	535 "
Perchloric Acid	6 "
Nitric Acid	209 "
Sodium Hydroxide	550 "
Fluorine Gas	960 Cu. Ft.
Florax	0.5 Lbs.
Hydrogen Sulfide	10 Cu. Ft.
Lackrymatory	70 Gallons
Triethylaluminum	110 "
Triethylboron	112 "
Triethylboron-RPI Mixture	39 "
Hydrazine	1900 "
Unsymmetrical-Dimethyl-Hydrazine	300 "
Mono-Methyl-Hydrazine	547 "
Nitrogen Tetroxide	612 "

continued -

BNA03134629

Toxic Materials Disposed of - continued

<u>MATERIALS</u>	<u>AMOUNT</u>
Inhibited-Red Fuming Nitric Acid	354 Gallons
Phosphoric Acid	30 "
Chlorine Trifluoride	80 Lbs.
MEF-5 Samples	20 Gallons
Misc. Lab Chemicals (Various Size & Type)	165 Gallons

GALLONS - 8,748  
Pounds - 310.5  
Cu. Feet - 970

BNA03134630

The following listed items indicate those toxic type materials presently on hand in the Protective Services Disposal Area. Amounts are approximate.

<u>MATERIALS</u>	<u>AMOUNT</u>	<u>CONTAINER</u>

**DISPOSAL OPERATIONS**

On Tuesday, 19 January 1971, the writer telephonically contacted Chief B. B. Haggard, Ventura County Fire Department, regarding disposal operations at SSFL. Chief Haggard was advised of the problems we are experiencing due to the self-imposed ban on burning. This ban has been instituted until such time as a formal meeting can be arranged with Chief Haggard, the writer and the Ventura County APCD Director.

It was explained that we have an Air Force Explosives Safety Inspection coming up in the near future, and that we would be in violation of Air Force Quantity Regulations unless we are able to dispose of some materials currently on hand.

The writer explained that the only safe means of disposal was on site by burning, due to the over-the-highway transport hazard of such material. Chief Haggard advised that under the APCD Rule #56, it would be permissible to make our disposal of the indicated materials at this time, and that his permission was granted under these circumstances.

We will arrange for the disposal operation as soon as possible, and will conduct the operation at Haggard's request only during those hours between 8:00 a.m. and 12:00 Noon. No specific date was given, however, we will advise the County at the time of disposal.

  
J. H. Ercroft, Chief  
Protective Services - SSFL

**MEETING REGARDING APCD RULES**

Thursday morning, January 21, 1971, the writer met with Chief E. B. Haggard and Battalion Chief J. Aslin, Ventura County Fire Department; Mr. J. Lehr, APCD Director, Ventura County; Henry Weiss, Operations Surveillance, and John McCarthy, Manager, Propulsion Operations Advanced Programs, in order to clearly define the effects of the new APCD rulings on our operations. After some discussion, four points were made that needed clarification. These points were:

1. Disposal by burning of hazardous materials; these materials being classified as explosives or hazardous due to some other inherent property.
2. Semi-hazardous. This category would include materials such as the various hydrazines and like compounds that are left over from programs or have been altered by additives, etc. These materials are of a hazardous nature, but could conceivably be disposed of by a vendor or some other means than burning, if a vendor could be obtained or a neutralization process could be worked out.
3. Control burning for the purpose of fire prevention.
4. Training of department personnel and other company employees, utilizing live fires.

Item #1 above, after discussion, would appear to present no great problems. Both Chief Haggard and Mr. Lehr readily understood the problems inherent and indicated that the mechanics of notification and permit issuance could be worked out. Chief Haggard directed Battalion Chief Aslin to work with the writer in setting up the mechanics involved in notification and requests for permits. It is felt by the writer that this process can be conducted by merely making a phone call to the Ventura County Fire Department, Battalion #4 Headquarters in Simi.

In the case of Item #2, it would be necessary for us to advise, through our Fire Department liaison, of the materials and quantities that we wish to dispose of and which would then be passed to Mr. Lehr, who would get back with us and H. Weiss so that an equitable solution could be found.

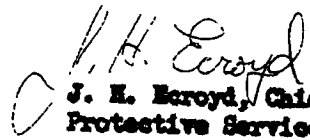

BNA07274704

Item #3, Chief Haggard indicated that at the time of controlled burns, an inspection would have to be made and ground rules worked out at the time. He made it a point to be quite definite in this area and to indicate that decisions in this area would be made by him or his subordinates with the tacit consent of Mr. Lehr. Mr. Lehr offered no objection to this. From this bit of conversation, the writer drew the conclusion that we would be somewhat limited in our burning program, but that we would have very good, solid support from Chief Haggard; and that he preferred to make the disposition rather than Lehr.

Regarding Item #4, Protective Services training and the training of operating personnel utilizing fire, both Chief Haggard and Lehr were in agreement that there was no problem; that this would be handled in the same manner and be correct according to law, as if the County Department itself was conducting the training.

In summation it is felt that the conversations were useful to both sides, and that we now have a good understanding of what the County will expect, and that under the provisions of APCD Rule #56, we are in basic compliance. The conversations were straightforward and there were no particular areas of disagreement between the parties. The main thing Chief Haggard and Mr. Lehr stressed, is that they be advised, as nearly as practicable, the types and quantities of materials of which are to be disposed.

The writer will meet with Battalion Chief Aslin at the earliest possible time to set up the procedures whereby notification to the County may be made. As soon as this is accomplished, a written procedure for Protective Services Supervision and the Control Center will be developed.

Subject APCD RULING RE OPEN BURNING

As you are aware, we have imposed a ban on all open burning since Oct. 1970. This has been necessary to assure compliance with Ventura County APCD rules until a meeting with concerned Ventura County authorities could be held.

The meeting has taken place and it is felt that a workable agreement has been reached. The writer will meet further with the County to work out the mechanics of the permit procedure and to define all areas to be covered. When this has been done, written Protective Services procedures will be instituted. Until such time of publication of P.S. procedures, all open burning is still banned. The only exception will be in those cases where a dire emergency is involved. That is in the case of a leaking container or an immediate danger to life or property is involved. Even under these circumstances, VCFD will be advised. They must be told the time of the burn, duration, type of material and the amount. They should also be made aware, as nearly as is practical, why we must burn, i.e. life or extreme property damage. Normally the writer will make the determination to burn or to take some other course of action. An effort will be made in all such instances, during odd hours, to contact the writer, however, if you are unable to make contact, you will be expected to use your own best judgment.

It must be remembered that indiscriminate burning can subject both you and the Company to disciplinary action.

VENTURA COUNTY FIRE DEPARTMENT  
Santa Paula, California

TO: James Lehr  
Air Pollution Control District

February 2, 1971

Chief John Ecroyd  
Rocketdyne Protective Services

Control 2

Control 4

FROM: Battalion Chief John Asselin

SUBJECT: Notification of Controlled Burning at  
Rocketdyne's Santa Susana Facility

As a result of a meeting held at the Rocketdyne Protective Services Headquarters on January 21, 1971, Chief Haggard has authorized Ventura County Fire Department personnel to relay, by radio, information from Rocketdyne to the Air Pollution Control District in Ventura. This will be done when Rocketdyne has items to be disposed of by burning.

To expedite this service, a special series of Ten Codes has been assigned, and will be used by the dispatchers at Control 4 (Simi Valley) and Control 2 (Ventura). The messages will be coded by personnel of the Rocketdyne Fire Department and decoded by personnel of the Ventura County Air Pollution Control District. The responsibility of the Ventura County Fire Department dispatchers will only be to relay the coded message by radio.

Items to be disposed of because of their hazardous nature will fall into five (5) general categories. Open burning for training and fire prevention will each fall into separate categories. Each category is assigned a Ten Code as follows:

10-60 Laboratory sample quantities of miscellaneous explosives, from a few grams to 1 pound in weight, usually small and varied among the examples listed below:

- a. Nitromethane
- b. Nitroform & Methyl Vinylether
- c. Hydrazine Nitrate
- d. Picric Acid
- e. T.N.T.
- f. Comp. C-4
- g. Tetranitromethane
- h. Nitro-glycerine Solution
- i. Hydrazine Nitrate in Methanol
- j. Trinitro Ethelene
- k. Diethylene Glycol Dinitrate

BNA07274706

10-61 Miscellaneous explosive mixtures; plastic explosives; Comp. B or C cast explosive solids, varying in weight from ½ pound to 5 pounds.

Examples:

- a. Comp. B (59.5% R.D.X., 39.5% T.N.T., 1% wax)
- b. Comp. C (88.3% R.D.X., 11.7% Plasticizer)
- c. R.D.X. (Cyclonite)  $C_3H_6N_6O_6$

10-62 Toxic and/or reactive explosive compositions of uncertain nature. Could be mixtures of items listed in 10-60 and 10-61. Exact formulation may be classified.

10-63 Damaged packaging of reactive/toxic chemicals and explosives. This could be any of the above items or materials of equal hazard. This category may involve larger quantities than the previous three categories.

10-64 Semi-hazardous materials or conditions. A.P.C.D. to call Rocketdyne personnel by telephone (213-347-9660). All items in this category will require consultation between Rocketdyne and A.P.C.D. to determine final disposition.

10-65 Training fires.

10-66 Burning of grass and brush for fire prevention in inaccessible areas. Requires prior approval and inspection.

10-Code Suffix Letters

Each 10-code will be suffixed with the letter A, B, or C, indicating the anticipated duration of the burning project as follows:

- A Short duration (1 to 15 minutes)
- B Medium duration (15 minutes to 1 hour)
- C Long duration (1 hour or longer)

Procedure

- I. When Rocketdyne determines that items must be disposed of, they will encode it according to the proper category, and call Control 4 by telephone and give them the following information:
  - a. Material to be burned (in Ten Code)
  - b. Duration of burn (letter suffix)
  - c. Exact time that burning will begin
  - d. Date burning will begin
  - e. Burning permit number

BNA07274707

Example:

Rocketdyne Fire Department is going to burn 1½ pounds of R.D.X. (high explosive) at 10:45 on February 7, 1971. They will call Control 4 and give them the following message:

"This is Chief Ecroyd at Rocketdyne. We will have a 10-61A at 10:45 today (Feb. 7, 1971). Our Permit number is VC24711. Will you pass on our request to the A.P.C.D.?"

II. Control Four will acknowledge the request and call Control Two in the following manner:

Control 4: "Control 2, Control 4."  
Control 2: "Go ahead, Control 4."  
Control 4: "10-61A, 10:45, 2-7, VC24711."  
Control 2: "10-4. KCR 739."

III. Control Two will call the A.P.C.D. at 648-6181, Ext. 3351 and repeat the information.

IV. The A.P.C.D. representative will then decode the information and enter the information in his log.

V. If the A.P.C.D. needs further information, they will call the appropriate personnel by telephone.

Capt. J. M. Haroyd  
D/052 - SS12

5515

**MEETING WITH VENTURA COUNTY FIRE DEPT.**

On Thursday afternoon, May 13, 1971, the writer met with Battalion Chief M. Sellers and Captain W. Burkhart, Ventura County Fire Department, regarding brush and weed abatement.

During the discussion Chief Sellers indicated that there would be no burning of combustible growth allowed anywhere in Ventura County, and that our only alternative would be hand cutting. He indicated that he had spent the last two weeks working on the brush abatement program within his area of responsibility and was sympathetic to the problems and costs inherent in hand cutting. However, under the present APCD rulings, there was no alternative.

The writer advised Ken Johns of the Maintenance Department, so that provisions can be made for the hand cutting. The program of brush abatement as we have known it in the past can no longer be supported. The total area burned in the past cannot be hand cut economically. It will be necessary to re-survey and determine those specific areas where concentrated efforts must be made. The economics will heavily weigh as to what can be done. At this particular time it is questionable whether D/052 personnel can be used for this cutting program due to labor contract commitments of Maintenance. If the scope of work should be more than Maintenance can perform, D/052 personnel could possibly be used. Ken Johns will have to make this determination.

Subject: INVENTORY, MATERIAL FOR DISPOSAL THAT CANNOT BE BURNED DUE TO APCD RESTRICTIONS, AND CANNOT BE DUMPED DUE TO WATER POLLUTION RESTRICTIONS

D/598, SS11  
H Weiss

The following inventory list contains the materials currently on hand in Advanced Programs for disposal. Some is in the Advanced Programs laboratories, and some of it is stored in the Burn Pit area. I expect that this list, along with one from Industrial Security, for materials at the Burn Pit (exclusive of what is in this list), and one for the excess materials at SPA should provide a preliminary view of the problem to be met in SSFL excess chemicals, propellants, and materials that cannot be destroyed nor discarded.

Subject: VENDOR REMOVAL OF WASTE MATERIALS

D/ 552  
A DiSepio ←

The following list illustrates the waste material that we have on hand that we do not feel we can put in the trash, etc., but must instead be carried away as a potentially dangerous material for proper disposal. The list is an accumulation from a number of sources, so I am not clear on how to spread the costs as of this time. However, as a first step I think we should get a vendor quote on the removal.

Quantity	Description

Subject . Disposal of Wastes

A list of chemical, fuel, oxidizer, oil, explosive type and miscellaneous wastes is being compiled for the purpose of obtaining a bid for disposal by an outside firm. Should your Groups have any wastes to dispose of, please submit a list to the undersigned for inclusion in the bid package by 27 November 1972.

As in the past, certain ground rules shall be followed in order to have the wastes disposed of. These are as follows:

1. All wastes shall be packaged or contained.
2. All wastes shall be identified by name and approximate weight or quantity.
3. Where required, fork lift support shall be supplied to the disposal firm.
4. The disposal price will be apportioned among the contributing departments.

Due to Ventura County APCD regulations, the future disposal of wastes on SSFL premises will, for all practical purposes, be non-existent. It is therefore recommended that all future proposals utilizing materials that will result in wastes requiring disposal contain funds for the disposal by outside firms.

The upcoming bid will be used for determining current disposal prices. Until that time, the following prices may be utilized for proposals:

3/4 Ton Truck Load - \$250.00  
 2 Ton Truck Load - \$400.00

Note that the minimum charge is \$250.00, assuming the load can be carried in a 3/4 Ton Truck.

Subject: Disposal of Identified Waste Fuels, Lubricants and Cleaning Fluids

Various dirty fuels, used lubricants, and cleaning solutions, stored in fifty-five (55) gallon drums at the Area I Burn Pit have been identified for disposal.

Following is a tabulation of these liquids.

MATERIAL	# OF DRUMS	USED FOR
Hydraulic Oil	9	Pressure Systems
Lube Oil - Light	153	Vacuum Pumps
Lube Oil - Heavy	9	Automotive
JP-4	11	Fuel Oil
RP-1	8	Fuel Oil
Acetone	1	Cleaning
Trichlorethylene	4	Cleaning
Paint Thinner	10	Cleaning
Isopropyl Alcohol	3	Cleaning

Please provide the appropriate designation for disposal and/or salvage.

INTER-OFFICE LETTERS ONLY

TO R. Clark, Chairman, Management DEPARTMENT Dept. 571 Canoga, Zone 2  
Safety Committee  
FROM D. J. Jolicœur ✓ DEPARTMENT Dept. 596-162 SS, Zone 12  
PHONE 5654 DATE 26 June 1961  
SUBJECT Activities Summary - Hazards Review Committee

The sixth meeting of the subject committee convened on Wednesday, 7 June 1961 at 8:30 A.M. in the PFL Manager's Conference Room. All members were present:

R. C. Ahlert	Research - Propellant Engineering
M. C. Blum	Research - Liquid Propulsion Section
J. F. Dain	Engineering Material Services
J. B. Ficklen, III	General Offices Consultant
R. B. Gordon	Industrial Hygiene and Safety
D. J. Hatz	Engineering Test
E. T. Higgins	Industrial Hygiene and Safety
D. J. Jolicœur	Engineering Test
R. J. Madden	Industrial Security
E. R. Mease	Facilities Engineering
S. A. Miller	Industrial Engineering
B. H. Minnich	Research - Solid Propellants
C. E. Schoettlin, M.D.	Administrator, Health and Safety
H. Weiss	Meteorologist

Guests Present:

J. Blanchard	Engineering Development Laboratory
E. Cain	Research - Analytical Chemistry
G. M. Cianko	Industrial Hygiene and Safety
W. Holms	Engineering Development Laboratory
R. Kraatz	Industrial Engineering

The first item on the agenda was a review by Dr. Schoettlin of safety problems in the Research Solid Propellant (NAKA) Area. S. A. Miller indicated to the committee that job orders for seven items for improvement, as indicated by letters from the Safety Department and the Solid Propellant Group, had received Divisional funding approval and that completion dates had been assigned.

D. J. Jolicœur commented that while these corrective job orders were necessary, the safety problems associated with the congested facilities in the hazardous testing areas of Research will still be with us. The contemplated relocation of the hazardous work to a remote facility in about 3 years was discussed.

To: R. Clark, Chairman, Management Safety Committee  
From: D. J. Jolicœur  
Subject: Activities Summary - Hazards Review Committee

26 June 1961  
Page 2

In the discussion that followed, M. C. Blum commented on another safety problem, that of the difficulty encountered by the PFL D/564 group in obtaining funding approval for necessary safety facilities and equipment for many Research operations. B. H. Minnich pointed out that in his area the majority of the projects carried out were funded by Study Authorizations which seldom carried any funds which could be used for safety items, and as a consequence the work had to be done with existing facilities and equipment with certain calculated risks involved.

To insure that established limitations of explosive materials and propellants are not inadvertently exceeded in NAKA areas, B. H. Minnich was requested to look into establishing a solid propellant inventory system.

The next items discussed were the hydrogen safety procedures. D. J. Hatz, who is chairman of an HRC ad hoc subcommittee to incorporate existing information on Hydrogen Use Procedure for all of Rocketdyne, passed out drafts of the "Hydrogen Propellant Handling Manual" for review by HRC members.

E. R. Mease introduced B. Latch of Dept. 583 who is chairman of the Electrical Subcommittee working to develop a hydrogen Electrical Code. It was felt the Hydrogen Electrical Code should remain separate from the Handling Manual since it was primarily for design criteria purposes. Mr. Latch stated the subcommittee had determined that for open test stands, where the possibility for trapping hydrogen has been eliminated, that explosion proof electrical items would be required only below the 5 foot level. Above the 5 foot level no special electrical items would be necessary.

R. J. Madden and other members brought forth several exceptions to the conclusions reached by the Electrical Subcommittee. After some discussion on the matter, the HRC Chairman requested that E. R. Mease reconvene the Electrical Subcommittee to resolve the issues raised before the next HRC meeting.

In view of HR's efforts toward promulgating a hydrogen handling manual suitable for all of Rocketdyne (California), several representatives from the Development Laboratory were invited to brief the HRC on the new Liquid Hydrogen facility under construction at the Vanowen facility. The pertinent facts from this discussion is as follows: The cryogenics laboratory was built to provide a corporate-wide capability in hydrogen studies. The laboratory building has 600 square feet of area. A maximum of 50 liters of LH<sub>2</sub> in portable transportable dewars will be in the laboratory at any one time. The maximum amount of LH<sub>2</sub> to be out of storage at any one time will be 9 liters, which will be in cryostats. Hydrogen vapors will be vented to a 30 foot high exhaust stack. The ventilation system will provide an air change every 2 minutes. A hydrogen detector placed in the exhaust will automatically step up the recirculating rate to 1 change per minute in the event that hydrogen vapors are detected in the exhaust. The control room is provided with positive pressure to keep hydrogen out. The flooring is conductive, bonded to static drain off rods, and to an encircling bus bar to which static grounds will be attached.

BNA00922319

To: R. Clark, Chairman, Management Safety Committee  
From: D. J. Jolicœur  
Subject: Activities Summary - Hazards Review Committee

26 June 1961  
Page 3

It was the consensus of the HRC that the safety factors that were being built into the laboratory were excellent. It was also realized that many of these safety features were not indicated for PFL stand operations, therefore, a separate or modified hydrogen safety procedure would be in order for the Vanowen cryogenic laboratory.

The safety consideration with the Vanowen chemistry laboratories was the next item on the agenda. R. B. Gordon reported on the nearly completed chart being compiled by Mr. G. M. Cianko, Industrial Hygienist, which itemizes storage limitations and emergency measures to follow on the hazardous materials being used in the laboratories. Cianko also discussed the safety procedures for the Vanowen laboratory areas which are being developed collectively by the Research, Safety and Fire departments. These efforts were commended by HRC.

The toxic vapor ventilation situation at the Vanowen building was discussed by R. B. Gordon and E. F. Cain who have been investigating this matter for HRC. It was reported that while it would obviously be preferable to have positive trapping of toxic vapors exhausted out the chemistry laboratory hoods, which could conceivably reenter the rest of the Vanowen building via the fresh air intakes located on the roof of the building, the expense of such a system requires a closer examination of the actual potential hazard involved. It was explained that in about 95% of the operations conducted, one gram or less of toxic materials would be present in a hood. If this were accidentally released out a vent stack, calculations indicate that harmless concentrations would be present on the roof of the building.

Occasionally larger quantities of toxic material are present in the hoods which, if an accident occurred, could release harmful concentrations of toxic vapors through exhaust stacks on the roof. To take care of this eventuality, R. B. Gordon explained the emergency plan which has been worked out by the Canoga Fire Department. In this plan, the Security Control Desk would be notified that a potentially hazardous operation was to be conducted in the chemistry laboratory by the Research Section. In the event of an accidental release of a potentially hazardous concentration of toxic vapors out the exhaust duct, Security personnel would turn off all intake fans in the building. The location of the turn-off switches have been marked on a plot of their location provided Security personnel. Practice exercises have demonstrated that all intake fans can be turned off in a matter of a few minutes. It is felt that this system will effectively reduce all possibility of having harmful vapors enter the Vanowen building.

The HRC expressed their approval of this common sense approach to the problem. R. B. Gordon assured the committee that the Safety and Fire Departments would maintain close surveillance on the ventilation system to insure that adequate precautions were being utilized and that the toxic vapors were being safely handled.

---

In the Round Robin discussion, S. A. Miller stated that funding approval for the phase III of the Special Propellant Area build-up had been obtained. J. F. Dain commented that the injector feed system modification to the chemical disposal area was being installed which is designed to increase the safety of this operation.

The final item of the meeting was the appointment of R. B. Gordon to head up an ad hoc subcommittee consisting of M. C. Elum, J. B. Ficklen, and D. J. Hatz to investigate and establish health and safety criteria for the use of beryllium at Rocketdyne.

The meeting was adjourned at 11:10 A.M., with the next meeting scheduled for Wednesday, 5 July 1961.

## 1. Purpose

1.1 To establish the minimum safety requirements for the disposal of chemicals, propellants, explosives, and/or other hazardous materials at the Propellant Disposal Area.

## 2. Area Operating Procedures:

2.1 Prior to disposal of hazardous material, an operating procedure shall be prepared by the group performing the disposal operation.

2.1.1 Protective Services personnel ~~usually~~ <sup>normally</sup> will perform the disposal operation. Disposal of scrap explosives, pyrotechnic and solid propellant waste will be accomplished by Research personnel with Protective Services providing the necessary fire standby.

2.1.2 Protective clothing requirements recommended by the disposal group and concurred in by Industrial Hygiene & Safety shall be included in the operating procedure (Protective Services Operating Procedure or Research SSOP).

2.1.3 Operating procedures shall be readily available to personnel conducting the disposal operation.

## 3. Notification:

3.1 Permission shall be obtained from Operations Surveillance (Meteorology) prior to the disposal of all toxic materials at the Chemical Disposal Area.

## 4. Area Warning System:

4.1 The area warning system shall be used during the disposal of all hazardous material at Chemical Disposal Area. This will be accomplished by placing either a manned roadblock or raising the red flag before the start of the disposal operation.

## 5. Storage of Hazardous Materials:

5.1 All hazardous materials shall be stored in the area designated for that material.

5.1.1 Adequate distances shall be maintained between incompatible materials.

## 6. General Safety Requirements

6.1 Employees shall conduct themselves in a safe and orderly manner while at the Chemical Disposal Area.

BNA03134589

6.2 Only those employees required for a given disposal operation shall be present in the chemical disposal area.

6.2.1 A minimum of two employees shall be present for all disposal operations.

6.3 All tools and equipment used in the disposal activities shall be maintained in a safe condition and properly stored when not in use.

TO: H. C. Galbraith  
M: F/E E. G. Addeo  
ONE: 485  
SUBJECT: FUEL TRACTORS AND TRAILERS; DEFECTIVE

DEPARTMENT: 596/5 - SanSu - Area I  
DEPARTMENT: 552 - SanSu - Area II  
DATE: 3 November 1958

Inspection of fuel tractors and trailers listed below revealed the following defects:

RC-4-406 - Fuel Trailer:

1. Air pressure gauge in the pump compartment is broken.
2. The left hose reel chican connection leaks.

RC-4-413 - Fuel Trailer:

1. Several fuel leaks in plumbing.
2. Spark arrester broken and coming apart.
3. #1 dome lid cannot lock closed.
4. Ground wire is not welded or bolted to frame.

RC-4-410 - Fuel Trailer:

1. Ground wire is not welded or bolted to frame.
2. #1 dome lid cannot lock closed.
3. #3 dome lid relief valve is stuck open.
4. Spark arrester broken and coming apart.

RC-4-420 - Fuel Trailer:

1. #1 dome cannot lock closed.

RC-4-421 - Fuel Trailer:

1. Several fuel leaks in plumbing.
2. #3 dome lid cannot lock closed.
3. Ground wire not welded or bolted to frame.

RC-4-423 - Fuel Tractor:

1. Exhaust pipe separated from the muffler.
2. Windshield wiper missing - driver's side.

It was also noted that none of the tractors or trailers are equipped with wheel chocks. I suggest that these chocks be secured to the vehicle by means of a sturdy chain in order to prevent loss of the chocks.

It is further recommended that wheel chocks be provided on all fuel, LNH and liquid Nitrogen storage sites for use by vendor operated trucks. It is recommended that these chocks be secured at a suitable location by means of a chain so that personnel cannot remove the chock from its fixed location.

MATERIAL ON HAND AWAITING DISPOSAL:

2 Cylinders Fluorine  
1 Cylinder T.E.A.  
1 Unidentified Cylinder  
3 Drums Benzol  
5 Drums Iso Octane  
2 Drums Unidentified Fuels  
2 Drums RPI and Pentaborane  
5 Drums Phillips Soltrol 150  
2 Drums Phillips Soltrol 170  
1 Drum Shell Dispensol  
8 Drums Enjay Dicyclopentadine  
5 Drums Union Thinner  
8 Drums Shell Isopar Diluent  
6 Drums Heavy Aromatic Naphta

MATERIAL ON HAND AWAITING DISPOSITION:

7 Drums Hydrazine  
35 Drums S606 Oil  
1 WFO Cylinder (1 Ton Cap.)

## INTER-OFFICE LETTERS ONLY

TO	R. J. Madden	DEPARTMENT	552 - SanSu - Area II
FROM	E. G. Addeo	DEPARTMENT	552 - SanSu - Area II
PHONE	520	DATE	7 October 1959
SUBJECT	MONTHLY REPORT - SEPTEMBER, 1959; CHEMICAL DISPOSAL - ACTIVITIES AT PITS, INSPECTIONS BURNING, CONVOYING, ETC.		

The following is a resume of time consumed during various activities at the Chemical Disposal Pits.

CHEMICALS AND/OR FUELS DISPOSED OF	AMOUNTS	FROM WHICH TEST AREA	DISPOSAL AUTHORIZED BY
Hydrazine	660 Gal.	S.P.A.	Bud Nelson 596-5
Hydrazine and Water	165 Gal.	S.P.A.	Bud Nelson 596-5
Pentaborane and RP-1	165 Gal.	Chem. Lab. A.	Bud Nelson 596-5
Benzol	165 Gal.	Drum Pad	Bud Nelson 596-5
Iso-Octane	275 Gal.	Drum Pad	Bud Nelson 596-5
Phillips Soltrol 150	275 Gal.	Drum Pad	Bud Nelson 596-5
Phillips Soltrol 170	110 Gal.	Drum Pad	Bud Nelson 596-5
Shell Dispersol	55 Gal.	Drum Pad	Bud Nelson 596-5
Enjay Dicyclopentadine	440 Gal.	Drum Pad	Bud Nelson 596-5
Union Thinner	275 Gal.	Drum Pad	Bud Nelson 596-5
Shell Laquer Diluent	440 Gal.	Drum Pad	Bud Nelson 596-5
Aromatic Naptha	330 Gal.	Drum Pad	Bud Nelson 596-5
Fuel Oil	110 Gal.	CTL III	Bud Nelson 596-5
Acetone	55 Gal.	Instrument Lab.	Bud Nelson 596-5
Lube Oil	175 Gal.	Delta	Bud Nelson 596-5
Kelite	175 Gal.	Department 546	Bud Nelson 596-5
T.E.A. (Cylinder)	150 Lbs.	S.P.A.	Bud Nelson 596-5
Gas Mixtures (Cylinders)	22 Cylinders	Chem. Lab. E	Bud Nelson 596-5
CO2	50 LB. Cylinder	Chem. Lab. B	Bud Nelson 596-5
Unidentified Cylinder	150 Lb. Cylinder	Area Unknown	Bud Nelson 596-5

Grand Total Gallons Burned - 3870 Gallons  
 Grand Total lbs. T.E.A. Burned - 150 Lbs.  
 Grand Total Cylinders bled off - 23 Cylinders

All of the above material was inspected by Mr. F. A. Nelson D/596-5 and after inspection all material was ordered destroyed.

T.E.A. cylinder was contained with RP-1. Twenty-two cylinders of gas mixtures were not of any further use and were only partially filled.
